

27/11/25.

Ex:1 Configuration of Network Components

Aim:

To study the following Network devices details.
PC, Server, Repeater, Hub, Switch, Bridge, Router,
Gateway, Transmission medium.

Apparatus:

Node: A network node is a connection point that can receive, create, store or send data.

Repeater: Functioning at physical layer. A repeater is a electronic device that receives a signal & retransmits it.

Hub: Ethernet hub, active hub, network hub, repeater hub.

Switch: A network switch or hub that connects networks segments.

Bridge: A network bridge connects multiple network at data link layer.

Router: A router that interconnects two or more computer network.

Gateway: A network node equipped for interacting with another network.

Server: A Type of Computer or device on a network resources.

Transmission media: The medium through which the signals travel from one device to another.

Result: Thus the network components are studied in detail.
